**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 6 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. 4,934,382 to Barone, Jr. (Barone).

Barone teaches a protective sheath or condom (Title and Col. 1, lines 5-14) for aseptic purposes (Col. 1, lines 14-25) with the condom being made of latex material (Col. 3, lines 10-16) and applied on a surface thereof with a lubricant (Col. 1, lines 29-36).

***Allowable Subject Matter***

3. Claims 1-5 are allowed.

The following is the examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest a reason to combine, the use of near-infrared light therapy and vibration/massage within a probe structure including a cylindrical member having an inclination of the upper part of the housing and a removable base support member which is positioned near the prostate through insertion into the anal cavity. The relevant prior art teaches that most prostate treatments are done using thermal therapy via the urethra with the possible addition of a sensor probe

positioned in the anal cavity. By way of example, U.S. 4,404,881 to Cathaud et al. teaches the use of a transrectal probe capable of receiving a detection instrument for monitoring the treatment of the prostate which is done using hyperthermia, and U.S. 5,234,004 to Hascoet et al. teaches a thermal urethral emitting probe and a rectal probe for controlling the positioning of the urethral probe. Therefore, the use of infrared light and vibration/massage with the structure of the probe device for positioning it in the anal cavity is considered novel and unobvious over the prior art of record.

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. 4,002,164 to Bradley and U.S. 2,342,557 to Ross et al. disclose prostate massagers. U.S. 5,454,794 to Narciso et al., U.S. 4,804,240 to Mori, U.S. 2002/0187533 A1 to Mross et al., U.S. 6,290,712 B1 to Nordquist et al., U.S. 1,381,194 to Homan, and U.S. 6,409,744 B1 to Marchesi discloses the application of phototherapy to the body both internally and externally.
